

Seeing is Believing

Alarm.com Image Sensor

The Alarm.com Image Sensor is a breakthrough new product that gives you an instant look into your property. It combines a traditional motion sensor, an integrated still camera, and interactive controls so you can see what is happening when you're not there. Now, you are able to quickly and easily view what caused an alarm or simply see a snapshot of activity with an instant Peek-In.

The Image Sensor can be placed in any room and will take pictures day and *night*. Use it to identify intruders or detect false alarms when the system is armed, and to check-in on scheduled guests such as the housekeeper,

pet sitter, babysitter, or maintenance personnel at any time. You can also set it up to keep an eye on specific areas like the office, bar or storage room. It will even automatically notify you via text or email with an image attachment when it has taken a picture.

Looking back at images is easy. Simply use Alarm.com's mobile apps for iPhone, Android and BlackBerry devices or just access your secure online account.

All images are securely stored in a searchable library where they can be named and archived for quick retrieval. Now it's easy to experience visual peace of mind.
